

Jacam Chemical is a company that manufactures chemicals used by the petroleum industry to assist in the extraction oil from wells. Jacam Chemical collects wastes generated by laboratory activities associated with the manufacture of their products and bulks them into 55 gallon drums. The drums are dumped into a well never a river. The chemicals include carbon tetrachloride. The location of the injection well is Lat:38.293945, Long: -97.931914
